### **The Langham Melbourne connects guests with Meru Networks' WLAN**

The Langham Melbourne has implemented a Meru Networks wireless local area network (WLAN) to offer all guests a seamless connection to the Internet. Popular for its sophisticated and timeless elegance, The Langham Hotel Melbourne offers five-star luxury accommodation and superb business facilities and conference rooms.

Neeraj Subramanian, information technology manager at The Langham Melbourne says that Meru Networks was selected over other major vendors based on its signal strength and scalability.

"The Meru Networks solution fit our requirements best, as it was able to provide a strong and stable signal strength, despite the potential hurdles our concrete buildings impose. With the Meru Networks WLAN, guests are able to surf the Internet without any interference, regardless of where they are in the hotel."

"This is especially important for guests who expect seamless connection whether they are relaxing at the bar, or busy working on events in the conference rooms. We needed a WLAN provider that could not only reach every corner of the hotel, but also allow for unexpected surges in guests' online activity."

Neeraj said, "Thanks to Meru's unique single-channel approach and ability to support high densities of wireless users with no channel interference, we have experienced a significant reduction of guest complaints. Guests are able to rely on The Langham Hotel's ability to provide visitors with an uninterrupted and accountable wireless connection."
