

Digium launches next-generation IP phones for Asterisk and Switchvox phone systems

New models feature Colour displays, offer ease of deployment, integrated applications, unique customisation options

August 2, 2016 — Digium®, Inc., the Asterisk® Company, has announced the release of its line of next-generation IP phones, the D65, D62 and D60. Digium phones are the only IP handsets specifically engineered to fully leverage the power of Asterisk, the world's most widely-adopted [open source communications software](#), and Switchvox, Digium's award-winning [unified communications \(UC\) system](#). The new models feature a large, colour display with modern design and a sleek footprint that appeals to businesses of all sizes and users who desire state-of-the-art technology.

The newly released Digium phones include the following models:

- D65 - An executive-level, feature-rich HD phone with a 4.3 inch colour display, wireless headset support, 6-line keys with 20 scrolling pages of Rapid Dial/Busy Lamp Field (BLF) keys, and dual 10/100/1000 Mbps network ports. This model is ideal for executives and users who need a colour display, top-of-the-line features, and require Gigabit networking.
- D62 - A mid-level HD phone with a 4.3 inch colour display, 2-line keys, and dual 10/100/1000 Mbps network ports. This is Digium's best value for users who need a colour display and require Gigabit networking.
- D60 - An entry-level HD phone with a 4.3 inch colour display, 2-line keys, and dual 10/100 Mbps network ports. The D60 is Digium's best value for any user who needs a colour display, but does not require Gigabit networking.

"Digium phones are the only phones tightly integrated with Asterisk and Asterisk-based phone systems, including Digium's Switchvox. No other phones on the market offer their advanced feature set," said Malcolm Davenport, Digium senior product manager. "In addition to easy plug-and-play deployment, all models include the Digium Phone App Engine, which enables the phones to run user-developed JavaScript applications to enhance productivity. Apps like interactive voicemail, visual call parking, one-touch call recording, searchable contact directory, and presence management, all take advantage of the unique and rich data connection between Digium phones and Asterisk."

Launching alongside the next-generation Digium IP phones is a new release of Switchvox, version 6.3. New features include multicast audio and call parking enhancements. Multicast audio support enables phones to receive wide-area announcements and pages without consuming additional resources on a Switchvox system. A significant enhancement to call parking allows users to create multiple custom-defined parking lots and assign them to different users and groups.

The new Digium phone models are now available.
