

Wavelink launches new business DECT wireless handset

KIRK 5020 conceals smart brain in a sleek body

Sydney, 3 August, 2007 - Wavelink Communications today announced the addition of the new KIRK 5020 DECT handset to its portfolio for wireless business communication. Designed to operate on KIRK's range of DECT systems which provide wireless extensions to both traditional and IP voice platforms, the KIRK 5020 is a leap forward in the development of wireless handset design and user interfaces. Jonathan Ordman, director of Wavelink said, "The KIRK DECT 5020 has been designed based on studies of handset user interaction during typical job-related activities. For example, office staff require an easy-to-carry handset which can distinguish between external and internal calls by ring tone and nurses asked for an easy-to-operate messaging interface with the ability to easily change personal preferences. The KIRK 5020 satisfies all of these requirements and creates an experience similar to using a mobile phone."

The KIRK 5020 weighs only 110g, contains a lithium-ion battery with an extra long battery life of 20 hours talk time and 200 hours standby time. The handset also has a customisable menu making navigation easy.

"Despite its elegant looks, the KIRK 5020 handset is robust and the long life battery will cover several shifts," said Ordman. "We envisage the 5020 quickly becoming the handset of choice for managers and administrators who spend the majority of their time in office areas, complementing the KIRK 4020, 4040 and 4080 industrial handsets which are designed for use in harsher environments."

Additional features of the KIRK 5020 include:

- 8 line colour display with intuitive navigation
- 250 entries in the phone book with 4 numbers per entry
- storage capability for 72-character text messages
- ability to integrate with business messaging applications
- hands-free loudspeaker
- vibrating ringer
- headset jack
