

Wavelink announces Microsoft Lync qualification for KIRK DECT solution

May 25, 2012 – Wavelink, a value added distributor of business IP, wireless, communication and network security and access solutions has announced that the KIRK DECT solution has achieved Microsoft Lync qualification.

KIRK Microsoft Lync Interoperability has now passed all qualification testing by Microsoft. It is the first professional wireless solution to achieve a Microsoft qualification and the first multi-cell DECT solution with direct interoperability to Microsoft® Lync™ Server 2010.

Ilan Rubin, managing director, Wavelink, said, “With KIRK Microsoft Lync Interoperability, customers will experience all the benefits of wireless telephony with great direct integration into the Lync platform without the need for a gateway.

“With more than 5,000 systems already installed in Australia and New Zealand, the success of the KIRK DECT system can be attributed to its flexibility and broad range of applications. KIRK handsets are widely recognised for their ability to operate in a wide range of environments, from office spaces to the harshest manufacturing facilities.

“The KIRK Wireless Server 6000 can now provide wireless extensions to the Microsoft Lync platform as well as integrate seamlessly with onsite text messaging systems such as Nursecall, alarms and building management systems.

“Customers choose KIRK DECT systems because of the brand’s reputation and reliability, value for money and the knowledge that Wavelink is serious about offering the best in service, training and support.”

KIRK systems are used by a diverse range of industries including retail, manufacturing, hospitality and healthcare, which lets organisations easily increase the mobility of their workforce as well as expand staff access to core telephony features.
