### **Industry's first WLAN management application for Apple iPhones available from Wavelink Communications**

*Meru Networks' 'E(z)RF OnTheGo' lets network administrators perform wireless management anytime and anywhere*

**Melbourne, August 20, 2009** – Wavelink Communications, a value added distributor of business IP telephony and wireless solutions, has announced that the industry's first Wireless LAN management application for Apple iPhones is now available in Australia.

E(z)RF OnTheGo™, the first wireless LAN management application available on a smartphone, has been introduced by Meru Networks for the Apple® iPhone. Network administrators can now work untethered from their desktop consoles over a Wi-Fi or cellular network. E(z)RF OnTheGo brings the comprehensive WLAN data from E(z)RF Network Manager 2.0 to dashboards formatted specially for the iPhone and iPod Touch.

Network administrators can access customised views of management data, for example network load, density, client counts and connection status and receive notifications of high-priority events such as user connectivity problems. They can then initiate immediate, context-aware network actions without having to return to their desks. As a browser-based application, E(z)RF OnTheGo does not require users to download any software into their iPhones.

Jonathan Ordman, director, Wavelink, said, "This new offering from Meru Networks is just another reason why resellers should get behind its solutions. E(z)RF OnTheGo provides more than convenience for IT managers.

"Critical information from the E(z)RF Network Manager 2.0 desktop console is delivered directly to IT managers on their iPhones, which means that even if a network manager is off site they can take meaningful steps to address critical issues either from a Wi-Fi hotspot or using the cellular network."
