

## MEDIA RELEASE

### **Polycom's DECT SIP Wireless Servers receive Cisco UCM Certification**

**Melbourne 11 February, 2009** - Wavelink Communications, a value added distributor of business IP telephony and wireless solutions, has announced that their new SIP-based Polycom KIRK DECT solutions have received certification for Cisco's UCM (Unified Communications Manager) VoIP telephony platform. This certification applies to both of its recently released systems; the KIRK Wireless Server (KWS) 6000 and the KWS 300.

The KWS 6000 is a SIP-based enterprise wireless telephony solution that scales from just a handful up to more than 4,000 users. Up to 256 radio units are supported. The KWS 300 is a single-cell solution that can support up to 12 cordless extensions with four simultaneous calls and up to six KIRK wireless repeaters in order to extend the coverage area. The solutions are scalable -- both in terms of the number of users as well as the coverage areas supported.

The Polycom KIRK DECT systems provide excellent feature integration with the Cisco platform, including caller id display, voicemail message indication and phone directory display.
